Enhanced Asset
Management

“The use of Enhansoft’s WIR (Warranty Information Reporting) is vital to our infrastructure. The very nature of our business demands 99.999% uptime and proactively knowing when a PC is coming out of warranty saves us countless hours.”

Enhansoft specializes in providing software solutions and consulting services within the system management area focusing on Microsoft System Center products.

Our products have a worldwide reputation for extending and enhancing Microsoft technologies by leveraging Microsoft System Center Configuration Manager (ConfigMgr / SCCM) & Systems Management Server (SMS) technologies to extend their asset information and reporting capabilities.

Warranty Information Reporting

Monitor Information Reporting

Enhanced Web Reporting

WIR determines the warranty information for each PC that it is executed on. This information is then returned to SCCM so that SCCM reports can be generated.

- Determines Warranty Information for a PC
- Returns collected data to SCCM
- Includes web report on collected data
- SQL Server Reporting Services (SSRS) Reports **NEW**

MIR gathers information about monitors attached to PCs through an inventory scan. This information is returned to SCCM.

- Determines monitor information such as make, model, serial number, manufactured date
- Returns collected data back to SCCM
- Includes web report on collected data
- SQL Server Reporting Services (SSRS) Reports **NEW**

EWR extends the asset information of SCCM, then formats the data in easy, accessible and comprehensive reports.

- Has over 90+ additional reports
- 15+ new or expanded categories
- **Ever expanding list of reports based on feedback**
- SQL Server Reporting Services (SSRS) Reports **NEW**

Enhanced Asset Management Suite

EAM suite includes all tools listed above.

Includes:

- Warranty Information Reporting (WIR)
- Monitor Information Reporting (MIR)
- Enhanced Web Reporting (EWR)
- Enhanced Network Device Discovery (ENDD) **COMING SOON**
