

Your IT Asset Inventory Retrieval Service and Custom Report Leader

“MIR enables complete logging of accurate display asset inventory information that is critical for my customers that are looking to gain a handle on their display asset management and lifecycle.”

SHAWN PORTER,
SENIOR MICROSOFT CONSULTANT,
COMPUGEN

Monitor Information Reporting - MIR gathers data about monitors attached to the user's PC through an inventory scan.

This data is then returned to Microsoft's System Center Configuration Manager (SCCM).

Reports are generated from SCCM.

Monitor Information Reporting – MIR

- Keep track of your monitor inventory.
- In less than one hour gather reliable information on the make, model, serial number and manufactured date of each monitor.
- Know which monitors are actually attached to a PC.

MIR includes multiple SQL Server Reporting Services (SSRS) reports including: count of active monitor states, count of monitors by year, list of active monitors by PC, count of monitors by manufacture, list of PCs with multiple monitors, and many more.

You can drill through to secondary reports.

Count of Active Monitor States

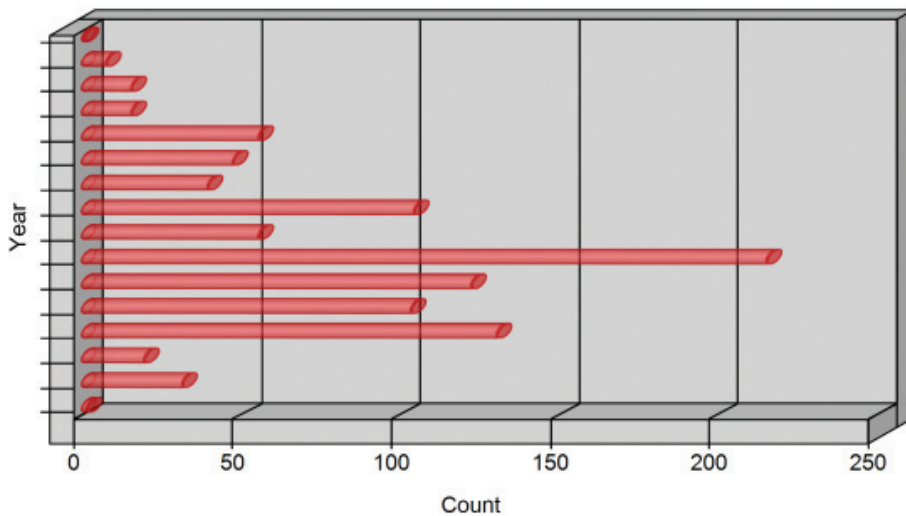

True - True
Real - Real
False - False

Active State	Count
True	1051
Real	14
False	1968

Detects multiple monitors, the power setting of each monitor, and reports on many more queries. MIR includes a scrub feature to clean up old data.

MIR Sample Reports:

Count of Monitors by Year

Be more efficient.
Be more accurate.

List of Monitors by PC

PC	Active State	Manufacture	Model	PNPID	Serial Number	Year	Week
DELLM4500	False	Goldstar Company Ltd	L1720P	5&3771184c&0&UID268435456	38745	2004	12
