

Your IT Asset Inventory Retrieval Service and Custom Report Leader

Warranty Information Reporting – WIR

- Keep track of each PC's warranty information – laptop, notebook, desktop and server.
- In less than one hour know the make, model, serial number, and status of each PC's warranty.

WIR includes multiple SQL Server Reporting Services (SSRS) reports including: count of warranty dates, PC warranty information, list of PCs by warranty range, and many more.

You can drill through to secondary reports.

“The use of Enhansoft's WIR is vital to our infrastructure.

The very nature of our business demands 99.999% uptime and proactively knowing when a PC is coming out of warranty saves us countless hours.”

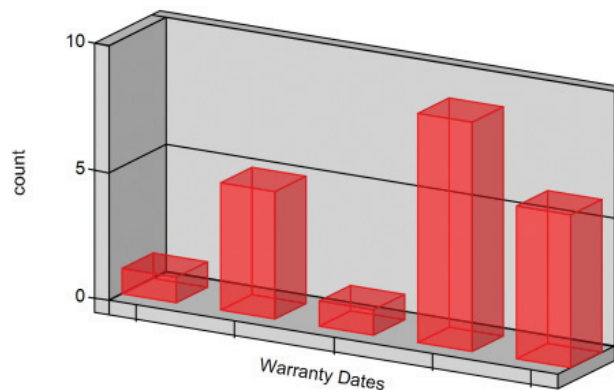

**ROBERT CARR,
UNIVERSITY OF KENTUCKY**

Warranty Information Reporting - WIR determines warranty information for each PC that it is executed on.

This data is then returned to Microsoft's System Center Configuration Manager (SCCM).

Reports are generated from SCCM.

Count of Warranty Dates

| Warranty Dates | Count |
|----------------|-------|
| < 1 Year | 1 |
| < 2 Years | 5 |
| 60 Days | 1 |
| Expired | 9 |
| Virtual Server | 6 |

Safe-guard your data—know which PCs need replacing now and which PCs you can afford to hold onto. Generally, a PC warranty lasts 3 years, so every year after the warranty expires costs more money in repairs, down time, and extra IT service hours. Not to mention the potential loss of invaluable data.

WIR Sample Reports:
